

## A SHORT HISTORY OF HOW WIKIPEDIA HAS BEEN REJECTED

Wikipedia has always tried in vain to project itself as a legitimate vehicle of learning but it is well known that it indulges in sordid distortions and attacks on scholars, so it has been rejected overwhelmingly when this occurs. No one should donate to Wikipedia, indeed it should come under parliamentary and congressional enquiry. It is severely allergic to the work of my colleagues and myself, which it has distorted out of all recognition, while not allowing the right of reply. A small group of technically incompetent and deeply vindictive people tried to take it over. The credibility and credentials of these people are examined first. As usual with Wikipedia they hide behind anonymity and call themselves moderators.

The first one is Akhlesh Lakhtakia, (“Science Guy” on Wikipedia). The first Wikipedia article on my work was posted by a person unknown and mutilated by Lakhtakia, who has a long history of extreme personal animosity towards myself. He first approached me when I was at Cornell Theory Center, but soon became deeply hostile. On one occasion I was told I would be buried for B(3). Instead it was nominated several times for a Nobel Prize. These personal threats took place in the early nineties, whether they were death threats or uncontrollable rage is anyone’s guess. They were followed up by papers in *Physica B* which appeared entirely without my knowledge. I replied to them in van der Merwe’s eminent “Foundations of Physics Letters”. In those days there was no Wikipedia, and no one missed it. As soon as someone wrote an article about B(3) it was ripped apart by Lakhtakia, who had managed to become a moderator. Later on he was caught sending ethnic hate mail against the People of Wales by our feedback software and reported to the Penn State police for hate crime. Soon after, “Science Guy” disappeared from Wikipedia. This gives an idea of the impeccable fairness of mind and enlightened scholarship of this so called encyclopedia, in reality a propaganda outlet for pseudoscience, the failed standard model of physics. No ethnic bigot can have any credentials in science or society.

Wikipedia made a series of sordid personal attack on my work and myself almost immediately after I was appointed Civil List Pensioner in 2005, directly by the Head of State, Elizabeth II., and Parliament. It didn’t like this at all, it was not supposed to happen. The cyberstalker and fraudster Gerard Bruhn e mailed everyone with nonsense mathematics in an attempt to con them into thinking that Cartan geometry is wrong. This nonsense or magic mathematics was rebutted many times on [www.aias.us](http://www.aias.us). Bruhn, Lakhtakia and pals began to harass Alwyn van der Merwe and eventually destroyed his eminent journals, “Foundations of physics” and “Foundations of Physics Letters”. These are criminal offences. I am enraged at this to the present day. Why should nonentities be allowed to destroy leading journals? Why should Jo McCarthy be allowed to destroy innocent people? It is the same thing exactly. Exposing Bruhn to be a fraudster is very easy, I use the same mathematics as everyone else, and no one else is attacked. These are the hundred year old mathematics of Cartan geometry. There is nothing wrong with them, and my work is based directly on them. It does not take a genius to see that Bruhn was attacking me, not the mathematics. It was the archetypical witch hunt. Bruhn suddenly disappeared and stopped harassing in about 2008, leaving behind a trail of rubbish. His h index is difficult to find with an electron microscope.

There was a counter attack that effectively destroyed Wikipedia’s credibility entirely, the disgraceful distortion of my biography was removed. I remember talking about this by phone to a moderator, who became enraged with anger at my critical remarks. Wikipedia is run by paranoid and microscopic nonentities who hide behind anonymity. They are very similar to Nixon’s plumbers or burglars. Nixon was a criminal who happened to be President of the United States. The wiki article on ECE theory rolled out the magic mathematics by Bruhn. I was not allowed to reply. All the time this was happening, the true Cartan geometry continued to be taught in real universities, and not a plumber’s rag. The wiki gang was joined

by the unstable and abusive Rodrigues, and by a nonentity called 't Hooft who was appointed to purge new thought. The magic mathematics of Rodrigues appear only in journals he controls, they have not replaced the genuine mathematics of Cartan, used for example by Sean Carroll and myself. This incredibly sordid episode shows how mathematics can become so abstract as to be useless and incomprehensible, so in my own work I take the opposite course and simplify them as much as I can. There are many clear proofs of Cartan geometry on [www.aias.us](http://www.aias.us), consulted by millions without criticism. No one uses the magic mathematics of Bruhn and Rodrigues.

In about 2005 the world famous Evans Eckardt dialogue was started. Sometimes we are joined by the highly competent staff members of AIAS / UPITEC. The dialogue involves hundreds of checks, and computer algebra is used whenever possible. Wikipedia, the plumber's rag, has failed to record any aspect of this internationally famous dialogue. There are now seven hundred or so papers and books on ECE and offshoot theories, in English and classical Spanish (Castilian). All of this material is consulted constantly in all the countries and territories of the world, and at all the best universities, institutes and similar. None of the rubbishy distortions by Wikipedia are used by anyone, for the simple reason that the magic mathematics by Bruhn and Rodrigues do not work. I found this out myself when going through the fraud by Bruhn line by line and comparing it in all detail with the genuine mathematics of Carroll. Reproducible and repeatable circuits have been constructed using the Baconian methods of natural philosophy and explained precisely with ECE in a rigorously Baconian manner. This is Baconian science, real science with the minimum number of loose parameters. The standard model has been riddled with hundreds of refutations and has become pseudoscience. They are not able to reply to our exposure of their work as pseudoscience. There is nothing left of the standard model physics except the burnt out detritus of outright fraud, and only a few aspects remain intact.

The readership of the plumber's rag soon smelled bad fish, like an unlocked door at Watergate. In the same way as public rage at McCarthy and Nixon became overwhelming, the disgust at Wikipedia sordid attacks on innocent and eminent scholars and their families reached the point when it received very few consultations. I can see this from my referrals feedback data, which I have monitored daily for fifteen years. We get millions of referrals, those from wikipedia became ossified, or stopped increasing, about a decade ago. In desperation wikipedia has resorted to branding us wildly as pseudoscientists, using knee jerk logic in anonymity. It should consult a shaving mirror like Nixon, who always looked as if he was about to be found out, hiding among a ton of rotting expletives in the alley of a thousand dustbins. There has been a huge backlash against the standard model on sites such as [www.wiki.naturalphilosophy.com](http://www.wiki.naturalphilosophy.com), listing hundreds of books and tens of thousands of pages which refute the standard model and which reduce wikipedia to yesterday's melted snow.

In the course of these developments the ECE theory has been checked more often than any theory in history, its mathematics are always worked out with computer algebra. Many of its proofs are self checking, for example the proof of the Cartan identity and many other examples. The establishment and publishing methods of standard physics have been rejected in favour of a fast moving and accurate method of publication. The self appointed censors, the yellow eyed big brothers of physics, are simply ignored. For example 't Hooft's monomaniacal attempt to rip up the world famous articles of ECE has been subjected to international derision, the articles by now are all classics, read tens of thousands of times each.

One can stop armies, but not the march of ideas (Victor Hugo).
